

SEVEN WORLDS 21 GAMES

A 2D HTML Canvas Game Design Guide

A sequential campaign from the first escape to the System Error Core

Each game includes its objective, controls, core rules, level structure, hazards, and clear win conditions. The concepts are designed for readable 2D play and can be built with HTML Canvas.

How to use this guide

The campaign follows the seven worlds in the exact order provided. Each world contains three short, distinct games. Build the player movement and feedback first, then add hazards, level progression, and completion states.

Recommended shared structure

1. Title screen: show the game name, one-sentence goal, controls, and Start button.
2. Play state: update input, player movement, enemies, hazards, timers, and objective progress each frame.
3. Feedback: show health, timer or charge, collectibles, warnings, and checkpoint state clearly.
4. End state: pause gameplay on win or loss; offer Retry and Continue.
5. World progression: completing all three games unlocks the next world. Save the current world and game locally so a refresh does not erase progress.

Campaign order

1. World 1: Origins & System Escape ([HELLEVATOR](#) / [DISTRICT 9](#) / [MIROH](#))
2. World 2: Cyber Concrete & Anarchy ([YELLOW WOOD](#) / [GO LIVE](#) / [IN LIFE](#))
3. World 3: Raw Power & Identity ([GRRR/BEWARE](#) / [NOEASY](#) / [CHRISTMAS EVEL](#))
4. World 4: Cyber Matrix & Hearts ([ODDINARY](#) / [MAXIDENT](#) / [SKZ-REPLAY](#))
5. World 5: Celestial & Concert Arena ([5-STAR](#) / [ROCK-STAR](#) / [ATE](#))
6. World 6: Next-Gen Horizons ([HOP](#) / [GIANT](#) / [KARMA](#))
7. World 7: Cosmic Multiverse ([DO IT](#) / [THIS & THAT](#) / [SYSTEM ERROR CORE](#))

World 1: Origins & System Escape

HELLEVATOR / DISTRICT 9 / MIROH

Break out of a controlled city: climb, breach the perimeter, then carry momentum through the highway escape.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

1.1 Hellevator Shaft Escape

VERTICAL PLATFORMER

Reach the extraction hatch at the top of a deep elevator shaft. Arrow keys or A/D move; Space jumps; hold a direction to steer in air. The player lands on elevators that travel between fixed stops and can ride them upward. Falling debris gives a brief warning shadow before impact; laser grids rise from below in timed pulses. Each section teaches one hazard, then combines moving lifts, debris and lasers. Checkpoints sit on safe maintenance ledges. Win by reaching the hatch; lose a life by falling below the camera or touching a live laser.

1.2 District 9 Wall Breaker

2D SIDE-SCROLLER SHOOTER

Move right through the security perimeter and destroy the shield nodes protecting the outer wall. A/D or arrows move, Space jumps, and click or J fires in the facing direction. Drones telegraph attacks before swooping; shoot them or dodge. Energy barriers block progress until their power nodes are destroyed, encouraging aim and movement together. Build the level from short combat lanes, cover pockets and a final wall breach arena. Reach the breach point with health remaining to win.

1.3 Miroh Maze Runner

HIGH-SPEED MOMENTUM DASH

Race across concrete highway ramps while preserving speed and choosing safe routes. Left/right steer, Space jumps, and Shift or X dashes; releasing inputs reduces steering without instantly cancelling momentum. Slopes accelerate or slow the runner, while gaps and barriers require a jump or dash timed to the terrain. Place boost strips on risky routes and safer wide ramps beside them. The course escalates from gentle slopes to chained ramps and moving hazards. Finish the route before the timer or fall counter runs out.

World 2: Cyber Concrete & Anarchy

YELLOW WOOD / GO LIVE / IN LIFE

Slip through a surveilled city, improvise under pressure, and learn to use the security system against itself.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

2.1 Yellow Wood Stealth Run

TACTICAL STEALTH PLATFORMER

Collect golden data chips and reach the exit without being spotted. Arrows or A/D move, Space jumps, and Down crouches. Searchlights sweep predictable arcs; standing in a lit zone fills an alert meter, while shadow zones conceal the player. Learn each light cycle, pause in cover, and move between safe pockets. Chips can be placed on optional exposed routes to reward risk. If the alert meter fills, a short pursuit begins; escape to cover to reset it. Collect the required chips and reach the exit.

2.2 God's Menu Kitchen Rush

TOP-DOWN TIME MANAGEMENT

Complete a sequence of food orders before the service timer expires. Use arrows or WASD to move around counters, E to pick up or interact, and Space to deliver at the pass. Each order lists ingredients; collect them in the correct set and bring them to the marked station. Stove flames pulse on and off and temporarily block tiles. The kitchen layout introduces one station at a time, then adds simultaneous orders and tighter routes. Wrong deliveries cost time; finish the required orders to clear the shift.

2.3 Back Door Phase Dash

RHYTHM DODGE ARCADE

Evade pursuing security glitches by phasing through the correct door on each beat. A/D changes lanes, Space or click phases through a doorway, and the beat indicator supplies timing. Door frames appear in a sequence; matching the active cue opens the safe route, while a mistimed or wrong door costs a heart. Start with slow isolated cues, then combine lane changes and shorter beats. Audio is optional: a visible pulse and countdown keep the game playable without sound. Survive to the final exit.

World 3: Raw Power & Identity

GRRR/BEWARE / NOEASY / CHRISTMAS EVEL

Hold your ground in hostile territory, turn force into a tool, and solve a slippery winter route.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

3.1 Shadow Forest Hunt

TOP-DOWN SURVIVAL GRID

Gather the required energy shards and find the forest exit while avoiding shadow wolves. WASD or arrows move one tile at a time; Space can trigger a limited decoy pulse. Wolves patrol grid paths and chase when they see the player. Trees and stones block movement and provide line-of-sight cover. Collect shards to charge the exit beacon, using decoys to draw wolves toward empty corridors. The grid becomes more connected as the player advances. Win by activating the exit; being caught costs a heart.

3.2 Thunderous Soundwave Clash

2D WAVE SHOOTER

Cross rooftop platforms while using sonic pulses to clear incoming threats. A/D move, Space jumps, and J or click fires a horizontal wave. Waves travel in a straight line and can destroy light obstacles or stagger enemies; heavier threats need multiple hits or a platforming detour. Rooftops alternate between combat lanes and jumps. Telegraph enemy waves at the screen edge, with a safe landing zone visible before they arrive. Reach the final rooftop with at least one life.

3.3 Christmas EveL Present Panic

TOP-DOWN ICE COLLECTOR

Collect every required gift box on an icy board without being hit by snowballs. Arrows steer; the player continues sliding briefly after input stops, so plan turns early. Walls and bumpers redirect rolling snowballs. Use corners to change direction, and route through gifts without trapping yourself against a wall. Later rounds add more snowballs and narrower passages. Collect the target number and reach the exit before time expires; collisions remove a heart.

World 4: Cyber Matrix & Hearts

ODDINARY / MAXIDENT / SKZ-REPLAY

Break the rules of a digital facility, defend its heart, and recover lost memories by reversing danger.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

4.1 Maniac Gravity Inverter

PRECISION PLATFORMER

Reach the sector exit by switching gravity through terminal controls. Arrows move, Space jumps, and E activates a terminal. Gravity flips between floor and ceiling; spikes and platforms are arranged on both surfaces. A flip changes the player's fall direction, while horizontal control remains consistent. Each chamber introduces a safe flip, then combines switches with timed doors and moving platforms. Terminals and checkpoints mark progress. Touching hazards resets to the latest checkpoint; activate the exit to win.

4.2 Case 143 Heart Defense

FIXED-SCREEN SPACE SHOOTER

Protect the core from descending glitch-monster waves. Left/right or A/D moves the ground turret; Space or click fires heart projectiles upward. Enemies descend in patterns and some show colored shield symbols; hit a shield with the matching heart type selected by number keys. Destroy enemies before they reach the bottom line. Waves mix slow armored targets with fast fragile ones, and a brief warning marks special attacks. Clear all waves with core health remaining.

4.3 Replay Cassette Rewind

SPLIT-SCREEN MEMORY PUZZLE

Restore system logs by repeating a sequence and rewinding hazards on the other side of the split screen. Use arrow keys to select a button and Space to confirm; R rewinds the last hazard step. The left panel shows a memory prompt; the right panel shows the live board. Repeat the sequence in order to open the path, then rewind a hazard to restore a safe configuration. Sequences grow longer gradually. Incorrect inputs reset the current sequence, not the whole stage. Complete all logs to unlock the exit.

World 5: Celestial & Concert Arena

5-STAR / ROCK-STAR / ATE

Climb into the stars, survive a live stage, and clear the way with quick target decisions.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

5.1 S-Class Constellation Climber

VERTICAL JETPACK GAME

Ascend through a star field by boosting between small platforms. Left/right steers, Space gives a short jetpack burst, and fuel recharges on platforms. Avoid falling debris and land on stable star platforms to refill. Camera scrolling rewards upward progress, while missed platforms remain recoverable for a short time. Introduce safe wide platforms, then narrow moving ones and debris lanes. Reach the constellation gate before fuel or lives run out.

5.2 LALALALA Stage Blitz

SIDE-SCROLLING RHYTHM RUNNER

Run across a concert stage and time jumps or slides to the beat. Space jumps, Down slides, and the player auto-runs. Amplifiers require a jump; low pyrotechnic jets require a slide; beat markers preview when hazards activate. A visual metronome supports play with muted audio. Sections introduce one obstacle type, then combine them in short readable patterns. Reaching the stage finale without exhausting the health meter clears the song.

5.3 Chk Chk Boom Target Rush

2D AIM & DASH

Auto-run through an obstacle course by tapping target reticles before impact. Click or tap a target to shoot it; Space or Shift dashes through a marked gap. Reticles identify destructible obstacles and priority targets, while non-target hazards must be avoided by lane movement with A/D. Keep the player centered and make decisions from clear screen cues. Later stages shorten the reaction window and mix targets with jumps. Clear the course and hit the final target to win.

World 6: Next-Gen Horizons

HOP / GIANT / KARMA

Master alternate realities, overpower a mechanized defense, and turn collected energy into a decisive arena blast.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

6.1 Quantum Dimension Switcher

2-COLOR PHASE PUZZLE

Reach the exit by swapping between Blue and Pink realities. Move with arrows or A/D, jump with Space, and press Q to switch dimensions. Platforms only exist in their matching color state; switching while standing on a platform is safe if the destination state has support beneath the player. Blue/Pink cues remain visible on platforms and switches. Rooms teach single-platform toggles before requiring mid-jump swaps and timed gates. Fall or touch a hazard to restart at the room entrance; reach the exit to clear.

6.2 Titan Mech Rampage

TOP-DOWN ARENA COMBAT

Destroy sentries and core towers in an open arena while managing mech health. WASD moves, mouse aims and fires, and Space dashes with a cooldown. Sentries telegraph shots and can be eliminated first; core towers have exposed windows after their shield pulse. Arena cover blocks projectiles for both sides. Collect repair cells between waves and use movement to avoid crossfire. Destroy all core towers before the mech is disabled.

6.3 Karma Arena Clash

SURVIVAL WAVE COMBAT

Survive in a closed stadium, collect power orbs, and use a charged blast to clear enemy waves. WASD moves, mouse aims, click attacks, and Space triggers the arena blast when the meter is full. Circular energy attacks expand from visible centers; dash out of their rings before they reach you. Orbs appear in risky open areas and fill the blast meter. Each wave increases pressure while preserving escape routes. Survive the final wave and activate the blast to finish.

World 7: Cosmic Multiverse

DO IT / THIS & THAT / SYSTEM ERROR CORE

Carry speed through branching realities and combine every learned skill to shut down the system core.

World progression: complete each game in sequence to unlock the next. Reuse the world's visual palette and sound motif across its three stages.

7.1 Do It Power Charge

HIGH-SPEED OBSTACLE DASH

Collect energy cells across a three-lane track and keep the speed meter charged. Left/right switches lanes, Space jumps, and Shift dashes through marked gates. Cells increase charge; missed cells gradually drain it. Obstacles are previewed ahead so the player can choose a lane, jump, or dash. Routes offer safe lanes with fewer cells and risky lanes with more. Keep charge above zero through the finish line.

7.2 This & That Dual-Track Rush

SPLIT-SCREEN CHOICE RUNNER

Switch instantly between the upper This track and lower That track to pass blockades. Press Up or Down to swap tracks; Space jumps over low obstacles. Each track has distinct hazards and collectibles, and some blockades require switching at the last safe marker. Split-screen indicators show upcoming events on both paths. Early sections teach one switch at a time; later ones chain switches and jumps. Reach the endpoint with enough health to win.

7.3 System Error Core Boss

MULTI-PHASE BOSS BATTLE

Defeat the final core by combining jumps, shooting, and dimension swaps. Move with WASD, jump with Space, fire with click or J, and switch dimensions with Q. Phase one teaches the boss's projectile pattern; phase two adds platforms that exist in only one dimension; phase three combines falling hazards and exposed core windows. Dodge during shielded attacks, then shoot the core when its tell turns bright. Checkpoints separate phases. Empty the boss health bar to shut down the system.
